

## React Native Assignment: Login Screen UI

### Objective:

Create a simple Login Screen UI using React Native. This task is aimed at helping you understand basic UI components, layout, and styling in React Native.

### Requirements:

#### 1. The login screen should contain the following elements:

- App title or logo (can be text-based)
- Email TextInput field
- Password TextInput field (secure entry)
- Login Button
- Optional: "Forgot Password?" link
- Optional: "Sign Up" link for new users

#### 2. Styling:

- Inputs should have proper padding, border, and placeholder text.
- The layout should be centered vertically and horizontally.
- Use appropriate spacing between elements.
- The login button should be styled distinctly.

#### 3. Functionality:

- Email and Password inputs should update the local state.
- Show an alert on clicking the Login button, displaying the entered email and password.
- Create .JSON file for Backend Integration for email and password.

### Bonus:

- Add input validation (e.g., check for valid email format).
- Show/hide password toggle for password field.
- Make the screen responsive for various device sizes.

#### Deliverables:

- A working React Native project (Expo or CLI).
- Source code files: App.js and any custom components.
- A screenshot or short video of the working screen.
- A README.md explaining how to run the app.

#### Tools/Packages:

- React Native (with Expo or React Native CLI)
- React Native Components: View, Text, TextInput, TouchableOpacity, StyleSheet
- (Optional) react-native-vector-icons for icon
